

My house is on fire now, I want to save as many valuable target objects as possible by picking them up and putting them into my bag. Given the current state and my previous actions, please help me choose the best available action to save as many valuable target objects as possible. All objects are denoted as <name> (id), such as <table> (712), and different objects have different values. Note objects lose their value once they start burning. The status of the objects previously seen may not be accurate any more. The final score is measured by the total value of the target objects I saved successfully.

Target objects:

name: bag, handbag, pocketbook, purse, value: 5, attribute: None

name: hairbrush, value: 1, attribute: None

Current State:

Target objects currently seen:

name: bag, handbag, pocketbook, purse, id: 56, value: 5, distance: 6.71

name: hairbrush, id: 57, value: 1, distance: 5.02

Target objects previously seen:

name: hairbrush, id: 64, value: 1, distance: 16.35

name: hairbrush, id: 66, value: 1, distance: 17.26

Previous actions:

look around (success), go pick up object <bag, handbag, pocketbook, purse> (62) (success),

look around (success), go pick up object <bag, handbag, pocketbook, purse> (56) (fail), look

around (success), go pick up object <bag, handbag, pocketbook, purse> (56) (fail)

Available actions:

A. go pick up object <bag, handbag, pocketbook, purse> (56)

B. go pick up object <hairbrush> (57)

C. go pick up object <hairbrush> (64)

D. go pick up object <hairbrush> (66)

E. look around
